

20^{Years}

**Leader Of High-end
Laboratory Customization**

SHENZHEN VOLAB TECHNOLOGY CO., LTD.

“We must take the construction of national laboratories as the starting point to strengthen national strategic scientific and technological strength.”

Xi Jinping: Strive to build a world power in science and technology - Speech at the National Science and Technology Innovation Conference, the Academician Conference of the Chinese Academy of Sciences and the Chinese Academy of Sciences, and the Ninth National Congress of the China Association for Science and Technology (May, 30th, 2016).

Strengthen The Country, Forge Ahead

To become a world power in science and technology, a major science center and an innovation highland in the world, we must have a number of world-class scientific research institutions, research universities, and innovative enterprises, and be able to continuously produce a number of major original scientific achievements. The Fifth Plenary Session of the 18th Central Committee of the Communist Party of China proposed to establish a number of national laboratories in major innovation fields.

Serving Science, Benefiting Mankind

Think about what the people think and address their urgent needs, focus on major livelihood issues such as major disease prevention and control, food and drug safety, and population aging, significantly increase the supply of public science and technology, and allow the people to enjoy a more livable living environment and better quality of life. Medical and health services, more reliable food and medicine. We must rely on technological innovation to build a low-cost, wide-coverage, high-quality public service system. It is necessary to strengthen inclusive and public technology supply, develop low-cost disease prevention and control and telemedicine technologies, and achieve inclusive sharing of high-quality medical and health resources.

ABOUT VOLAB

3000m² Operation Service Center

Founded in Shenzhen, Shenzhen VOLAB Technology Co., Ltd is a National High-tech Enterprise integrated with R&D, design, sales, and service of High-end laboratory furniture. Awarded as Shenzhen Top Brand, VOLAB always adheres to the corporate mission of “Serving Science and Benefiting Mankind”, the service concept of “Customer First, Dedicated Services” and the development concept of “Innovation, Manufacturing and Service”. VOLAB has now obtained more than 50 patents, establishing the industry advantage of “Technology and Brand”, and has become the leader of High-end customized laboratory brand in China.

Certified with ISO 9001, ISO 14001, SEFA 10, SEFA 11, ASHRAE 110, EN 14727, EN 13150-2020, EN 14175, CE, CEC Ten-ring, VOLAB has been serving countries and regions covering Europe, North America, Middle East, Asia, etc.

100 000m² R&D and Production Base

Equipped with the industry-leading Prima Power sheet metal flexible production line, VOLAB adopts international manufacturing technology, implements strict quality control, and achieves fully automatic sheet metal standardization and refined flexible production, which ensures the high quality of sheet metal processing, high efficiency and manpower saving. VOLAB owns a fully automatic spraying production line at a length of more than 500m, and adopts ceramic treatment process. The whole production process complies with National Energy Conservation and Emission Reduction Standard. The self-developed 3D virtual equipment customization software - VOLAB Cloud can help to realize High-end customization and rapid layout of laboratory furniture, quickly produce renderings, quotation, and single-piece drawings, and can be directly connected to the production line.

VOLAB is dedicated to promote the transformation and upgrading of laboratory equipment, committed to making laboratories safer, greener and more interconnected, and realizing our mission of "Serving Science and Benefit Mankind" !

Introduction

V9 series products pursue perfection in craftsmanship and modeling, interpreting the perfect combination of art and laboratory in safety, practicality, and humanization. The design of the v9 series comes from diamonds, which is of high hardness, high value, high stability. The appearance uses the large chamfer-ed shape of the suspended bridge gemstone section as the main design element, which extends to other parts to achieve visual unity and coordination as a series design.

Certificates: ASHRAE110-2016, EN14175-3-2019, GB6412-1999, GB24820-2009, QB/T 5589-2021, CEC Ten-ring.

V9 series is including: Fume hood(bench-mounted, desktop), Laboratory benches(side benches, central benches, sink cabinet, corner cabinet, reagent rack, wall-mounted cabinet, mobile cabinet), Cabinet(reagent cabinet, utensil cabinet, gas cylinder cabinet, wardrobe), etc.

Features

- 1、 V9 fume hood can ensure safety in low wind conditions with the face velocity at 0.3m/s and perfect anti-interference ability.
- 2、 The series uses self-molding aluminum alloy handles with unique appearance.
- 3、 It adopts prefabricated design, easy installation, flexible matching, energy saving and environmental protection, and can greatly reduces the cost of secondary relocation or modification of the laboratory with most parts reusable.
- 4、 The multi-functional combination style cabinet of the experimental bench can meet most needs of the market. The arc design of the door panel ensures the safety of the users. The collision of gray and white colors makes the laboratory full of vitality.

V9 Bench-mounted Fume Hood

Single piece drawing

Face velocity 0.3m/s, tracer gas leakage rate 0PPM, wind resistance 17.5pa, perfect anti-interference, ensures safety in low wind conditions.

The main structure is modular assembled with aluminum alloy profiles, steel cold-rolled plates (1.2-1.5) sheet meta. The sheet meta is processed with pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

VOLAB fume hood uses a narrow-framed column with a curved shape and an air supply wing (material: industrial level aluminum alloy). The movable window is embedded inside the column without being exposed. This design helps to prevent air leakage and can increase the visualization area. Imported from Italy, the glass has a thickness of 3.7mm and a width of 10mm. The movable window has an anti-fall function to enhance the safety.

Functional accessories: Deflector fixings (material: nylon), lining plate (material: compact laminate/ceramic fiber board), electrical socket (self molded);

Structure accessories: Customized self-molding aluminum alloy handles, window handle, handle decorations, height limit blocks (material: aluminum alloy);

The electrical system is equipped with 1 set of 32A leakage circuit breaker, 2 pieces 16A three-hole dustproof sockets, and 2 pieces 10A three-hole dustproof sockets.

Certificates: ASHRAE110-2016、EN14175-3-1999,GB6412-1999、GB24820-2009、QB/T 5589-2021、CEC Ten-ring.

Item		V9 bench-mounted fume hood		
Model		V9-FG-1200	V9-FG-1500	V9-FG-1800
Dimension (L*W*H)		1200*900*2400MM	1500*900*2400MM	1800*900*2400MM
Work Top W		1110MM	1410MM	1520MM
Internal D		730MM		
Internal H		1345MM		
Work H		850MM		
Gas Collecting Hood Diameter		250MM	250MM	315MM
Optional		VAV, CAV, water cup, water valve, air valve, synthetic rack		
Material	Structure	Upper cabinet disassembly/lower cabinet integral welding		
	Socket	Waterproof socket 10a*3, 16a*2, air switch		
	Visualization window	Explosion-proof tempered glass		
	Lining board	5mm compact laminate/ceramic fiber board		
	Work top	Physio-chemical board/ceramic board/epoxy resin board		
	Lower cabinet	3 doors / 4 doors cabinet		

V9 Desktop Fume Hood

Face velocity 0.3m/s.The main structure is modular assembled with aluminum alloy profiles, steel cold-rolled plates (1.2-1.5) sheet meta. The sheet meta is processed with pre-degreasing, main degreasing, water washing, ceramicization, water wash- ing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Nether- lands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

Functional accessories: Deflector fixings (material: nylon),

lining plate (material: compact laminate/ceramic fiber board), electrical socket (self molded);

Electrical system:

Desktop single side: The electrical system is equipped with 1 set of 25A leakage circuit breaker, 2 pieces 16A three-hole dust-proof sockets, and 2 pieces 10A three-hole dustproof sockets.

Desktop double side: The electrical system is equipped with 1 set of 25A leakage circuit breaker, 4 pieces 16A three-hole dust-proof sockets, and 4 pieces 10A three-hole dustproof sockets.

	Lining board	5mm compact laminate/ceramic fiber board	

V9 Cabinet (Reagent Cabinet/Exhaust Reagent Cabinet/Utensil Cabinet)

Reagent cabinets are used in laboratories to store laboratory drugs, reagent bottles, glass test tubes , etc.. The exhaust reagent cabinet can be connected to ventilation ducts and can be equipped with a timed exhaust device.

The utensil cabinet is suitable for storing various acid-base drugs in the laboratory, such as sulfuric acid, hydrochloric acid, nitric acid and laboratory instruments after cleaning. Double locks are optional to facilitate the safe storage and management of laboratory drugs.

The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

Certificates: EN14727-2005、SEFA11-2020、GB 24820-2009 、CEC Ten-ring.

	Structure	Reinforced disassembly and assembly structure		
	Handle	VOLAB blue arc handle		
	Hinge	DTC buffer hinge		
	Exhaust outlet diameter	None	110MM	None

V9 Cabinet (Gas Cylinder Cabinet)

Gas cylinder cabinets are used in laboratories to store hazardous gas cylinders and other items.

The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

The gas cylinder cabinet is equipped with a purging system, alarms and exhaust holes inside to improve exhaust ventilation, protect cylinders (gas bottles) from fire outside the cabinet, and protect surrounding objects from fire inside.

Certificates: EN14727-2005、SEFA11-2020、GB 24820-2009 、CEC Ten-ring.

Item		V9 gas cylinder cabinet with alarms
Model		V9-QPG-900
Dimension (L*W*H)		900*450*1800mm
Material	Cabinet body	1.0mmsteel
	Visualization window	Square with rounded corners 5mm glass
	Structure	Combined fastener assembly structure
	Handle	Safety lock handle
	Alarm	Yes

V9 Cabinet (Wardrobe)

Wardrobes are used in laboratories to store personal items such as clothes, shoes, hats and others.

The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

The door panel is equipped with ventilation holes, which can effectively maintain the air circulation in the cabinet. The built-in stainless steel clothes hanging rod and shelf support are easy to use and the space is reasonably distributed.

Certificates: EN14727-2005、SEFA11-2020、GB 24820-2009、CEC Ten-ring.

	Handle	VOLAB blue arc handle
	Hinge	DTC buffer hinge

V9 Benches

The laboratory bench consists reagent racks, suspended bridge modules, functional columns, wall-mounted cabinets, and base cabinets. It can be matched and combined according to customer needs. It also meets customer needs for water, electricity, and gas, creating convenient and comfortable laboratory working environment for users.

Introduction:

- 1、 Structure: 30*60 welded components and modular assembly of parts.
- 2、 The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization,

water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

- 3、 Hardware accessories:
 - (1)KAV or DTC high-quality silent three-section slide rail.
 - (2)Hardware accessories:DTC high quality hinge, 270°
- 4、 Handle: V9 Special molded aluminum alloy handle
- 5、 Maximum load capacity: 1000KG

Certificates: SEFA 10-2020、 EN 13150-2020、 GB 24820-2009 、 CEC Ten-ring.

V9 Laboratory Bench Function Cabinet

The sink cabinet is used for laboratory cleaning and disinfection, usually consisting of a sink and a work top. Its main function is to provide a clean and hygienic working environment to ensure the accuracy and reliability of experimental operations.

Two types: single-port and double-port. A single-port sink has only one faucet, which is suitable for use in some small laboratories; while a double-port sink has two faucets, which can supply cold and hot water at the same time, making cleaning and disinfection more convenient.

Corner cabinets are mainly used to store documents, and other items. They are generally placed in the corners of the laboratory and are used to connect vertical cabinets to improve space utilization and aesthetics.

The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

V9 Reagent Rack

The reagent rack adopts a modular assembly structure to meet the diverse needs of users. It is suitable for placing various reagents, and the height is adjustable.

The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

The support frame can be extended separately to lead the circuit from the upper part of the suspended ceiling to the experimental bench. It can also be used with functional columns to install gas pipelines and valves.

Certificates: SEFA 10-2020, CEC Ten-ring.

	Layer material	10MM thickness glass	
	Power Socket	Self-molded	

V9 Wall-mounted Cabinet

Wall-mounted cabinets are mainly used to store documents, and other items. According to different application scenarios, they can be divided into single-door (left and right), double-door, and four-door.

The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.

V9 Mobile Cabinet

The mobile cabinets are mainly used to store documents and other items, which can be flexibly adjusted at any time according to the needs of customer scenarios. It is often used at the bottom of the frame-type central table. According to the function, it can be divided into single-door(left, right), single-door single-drawer (left, right), and three-drawer cabinets.

The main structure is modular assembled with aluminum alloy profiles, 1.0mm thickness steel cold-rolled plates sheet meta. The sheet meta is processed with a series of complex processes including shearing, bending, welding, stamping and grinding, pre-degreasing, main degreasing, water washing, ceramicization, water washing, drying, epoxy resin electrostatic powder spraying (coating thickness 0.06 -0.08mm), using paint from AkzoNobel (Netherlands), using a 500m automatic spraying line (Suspension type assembly line), baked at 200 degrees, leveled and solidified, and can withstand salt spray testing for 48 hours.
